STATUS OF CHILDHOOD IMMUNIZATION IN KANSAS

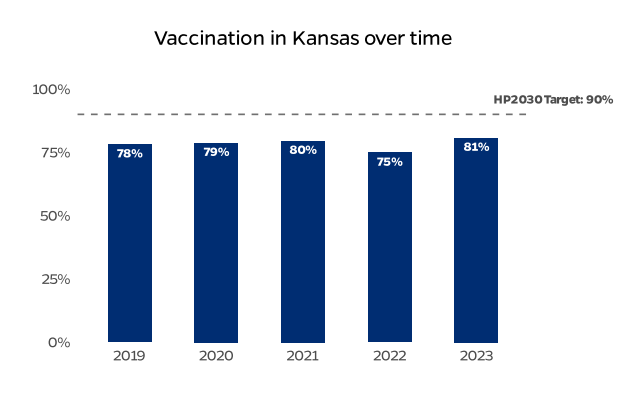
This brief illustrates the current status of childhood immunization in Kansas and is intended to inform state-level policy decisions and priorities. Takeaways include:

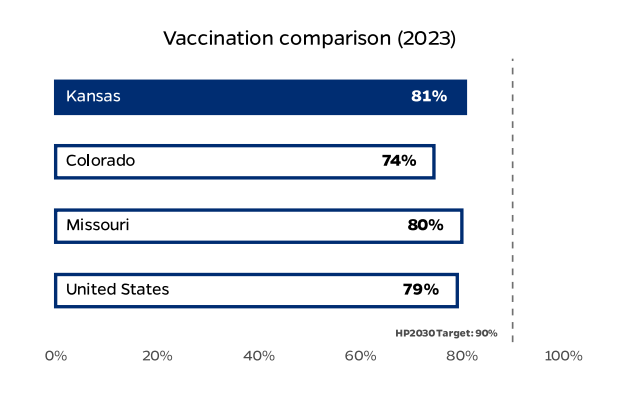
- State-level immunization coverage in Kansas for MMR vaccination is below national levels.
- Kansas's non-medical exemption rate among kindergartners is lower than the U.S. median.
- State-level per capita public health spending is lower than the national rate.
- Kansas has reported 90 cases of measles since January 1, 2025.

VACCINATION COVERAGE

Maintaining sufficient vaccination coverage is critical for establishing community protection. The charts below demonstrate how coverage for two critical vaccines has changed over time in Kansas and how it compares to neighboring states, national rates, and Healthy People 2030 (HP2030) targets.

Proportion of 2-year-olds fully protected with DTaP vaccines





In 2023, more 2-year-olds were fully vaccinated against diphtheria, tetanus, and pertussis (received all four doses of DTaP) in Kansas compared to the previous year. Coverage in Kansas is below the HP2030 target of 90%.

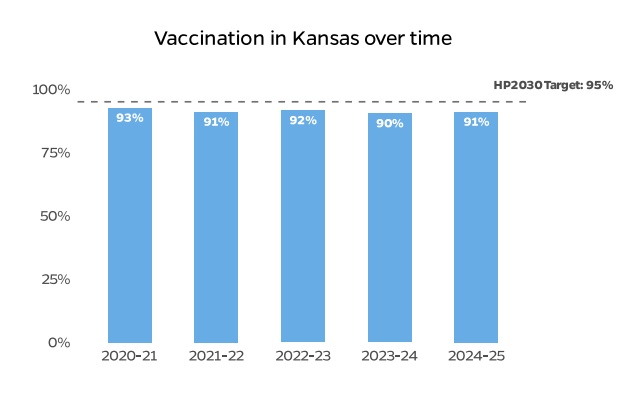
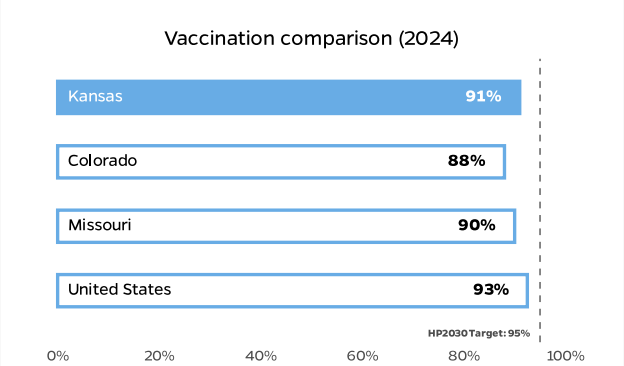
Proportion of kindergartners protected with MMR vaccines





In 2024, a higher proportion of kindergarteners completed the measles, mumps, and rubella (MMR) vaccine series in Kansas compared to the previous year. Coverage in Kansas falls short of the HP2030 target of 95%.

VACCINATION EXEMPTIONS

Many states allow children attending public school to receive vaccination exemptions for religious reasons or for personal reasons, sometimes referred to as “philosophical exemptions.” Higher rates of non-medical exemptions have been linked with increased disease transmission.

Allows personal exemptions?	Allows religious exemptions?	Non-medical exemptions — state	Non-medical exemptions — US median
NO	YES	3.3%	4%

Kansas's rate of non-medical exemptions among kindergartners during the 2024-25 school year is a slight increase from the state's 2023-24 rate.

PUBLIC HEALTH SPENDING

Low levels of public health spending are thought to contribute to suboptimal immunization rates. Nationally, Kansas ranks 38th in public health spending.

UNIVERSAL VACCINE PURCHASING

In states with Universal Purchase programs, the state government purchases all recommended vaccines for all children, regardless of insurance status. These initiatives can help to address disparities in vaccine coverage and support equitable vaccine access.

Universal Purchaser?
NO

SUPPORT FOR IMMUNIZATION

Strong policy commitment to immunization is critical for effective vaccination programs. The state legislature has recently introduced several bills that would affect state-wide childhood vaccination, a selection of which are described below. The arrows below indicate whether these bills would strengthen (↑) or weaken (↓) vaccine safety nets.

- ↓ KS SB 315 (Not enacted) – Would require child care facilities and educational institutions to grant exemptions from vaccine requirements without inquiring into the sincerity of the request
- ↓ KS SB 19 (Not enacted) – Would provide right to refuse vaccines for reasons of conscience
- ↑ KS HB 2369 (Not enacted) – Would allow pharmacists to order and administer FDA-approved vaccines for individuals 7 years and older
- ↓ KS HB 2045 (Enacted) – Changes religious vaccine exemptions for childcare facilities to loosen exemption procedures for parents with “sincerely held” religious beliefs

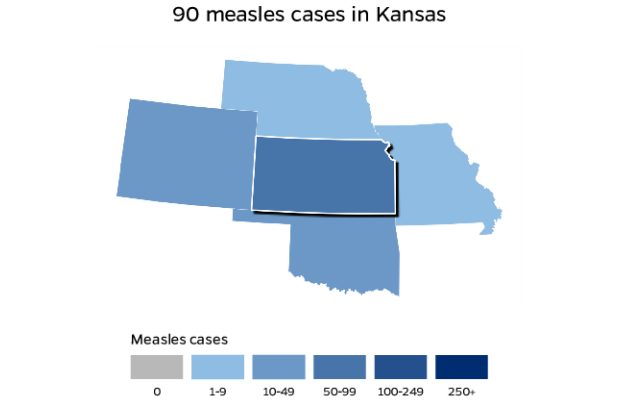
DISEASE STATUS

Measles outbreaks can indicate insufficient vaccination coverage within a population. Disease may spread across state borders when vaccine coverage is low. The map below visualizes the number of measles cases reported in Kansas and neighboring states between January 1, 2025 and September 15, 2025.



Source: U.S. Measles Tracker, IVAC.

Vaccines can help prevent expensive disease outbreaks. A 2018–19 measles outbreak in Washington was estimated to cost US$47,479 per case for both direct medical and public health response expenses.
