

STATUS OF CHILDHOOD IMMUNIZATION IN WYOMING

This brief illustrates the current status of childhood immunization in Wyoming and is intended to inform state-level policy decisions and priorities. Takeaways include:

- State-level immunization coverage in Wyoming for MMR vaccination is above national levels.
- Wyoming's non-medical exemption rate among kindergartners is higher than the U.S. median.
- State-level per capita public health spending is lower than the national rate.
- Wyoming has reported 9 cases of measles since January 1, 2025.

VACCINATION COVERAGE

Maintaining sufficient vaccination coverage is critical for establishing community protection. The charts below demonstrate how coverage for two critical vaccines has changed over time in Wyoming and how it compares to neighboring states, national rates, and Healthy People 2030 (HP2030) targets.

Proportion of 2-year-olds fully protected with DTaP vaccines

In 2023, more 2-year-olds were fully vaccinated against diphtheria, tetanus, and pertussis (received all four doses of DTaP) in Wyoming compared to the previous year. Coverage in Wyoming is below the HP2030 target of 90%.

Source: ChildVaxView

Proportion of kindergartners protected with MMR vaccines

In 2024, approximately the same proportion of kindergartners completed the measles, mumps, and rubella (MMR) vaccine series in Wyoming compared to the previous year. Coverage in Wyoming falls short of the HP2030 target of 95%.

VACCINATION EXEMPTIONS

Many states allow children attending public school to receive vaccination exemptions for religious reasons or for personal reasons, sometimes referred to as “philosophical exemptions.” Higher rates of non-medical exemptions have been linked with increased disease transmission.

Allows personal exemptions?	Allows religious exemptions?	Non-medical exemptions — state	Non-medical exemptions — US median
NO	YES	5.7%	4%

Wyoming's rate of non-medical exemptions among kindergartners during the 2024-25 school year is similar to the state's 2023-24 rate.

PUBLIC HEALTH SPENDING

Low levels of public health spending are thought to contribute to suboptimal immunization rates. Nationally, Wyoming ranks 25th in public health spending.

UNIVERSAL VACCINE PURCHASING

In states with Universal Purchase programs, the state government purchases all recommended vaccines for all children, regardless of insurance status. These initiatives can help to address disparities in vaccine coverage and support equitable vaccine access.

SUPPORT FOR IMMUNIZATION

Strong policy commitment to immunization is critical for effective vaccination programs. The state legislature has recently introduced several bills that would affect state-wide childhood vaccination, a selection of which are described below. The arrows below indicate whether these bills would strengthen (↑) or weaken (↓) vaccine safety nets.

-  WY SB 162 (Not enacted) – Would remove certain requirements to obtain non-medical exemptions to vaccine requirements
-  WY SB 24 (Enacted) – Allows pharmacy technicians to abstain from administering immunizations to children under 13 years
-  WY HB 44 (Not enacted) – Would establish parental rights in a minor child’s health care, repealing a provision authorizing vaccination of a minor without parental consent

DISEASE STATUS

Measles outbreaks can indicate insufficient vaccination coverage within a population. Disease may spread across state borders when vaccine coverage is low. The map below visualizes the number of measles cases reported in Wyoming and neighboring states between January 1, 2025 and September 15, 2025.

Source: U.S. Measles Tracker, IVAC.

Vaccines can help prevent expensive disease outbreaks. A 2018–19 measles outbreak in Washington was estimated to cost **US\$47,479** per case for both direct medical and public health response expenses.
